

## Citizen Science tool use in schools

### WHAT TO CONSIDER BEFORE USING CITIZEN SCIENCE TOOLS IN SCHOOL

1. Is there a stream nearby your school?
2. What type of activities are happening inside and outside of your stream?
3. Are these activities harmful or beneficial to the health of the stream?
4. What types of citizen science tools would you need to determine the health of the stream?
5. Which citizen science tool would you use first to assess the water quality of the stream and why?
